

**FOR  
IMMEDIATE RELEASE**

**SEANET TECHNOLOGIES PRESENTS SEAVIEW RTM APPLICATION PERFORMANCE  
LATENCY SOLUTION AT CMG IN SAN DIEGO**

*Innovative Performance Measurement Application Supplier to Giveaway iPod touch During  
Company Presentation*

**NEW YORK – NOVEMBER 26, 2007** – SeaNet Technologies ([www.seanet-tech.com](http://www.seanet-tech.com)), an innovative leader in application performance measurement solutions, today announced that it will be presenting its SeaView RTM solution at the Computer Measurement Group (CMG) conference in San Diego, California at booth #318 on December 2-7 at the Manchester Grand Hyatt.

SeaNet's SeaView RTM accurately measures both one-way latency and the response time of business application transactions in real-time over IP networks for both enterprise and financial industries. SeaView RTM is specifically designed to handle the unique requirements of Financial Services firms to measure the one-way latency of critical market data feeds.

Attendees of the SeaNet vendor presentation will have a chance to win a free iPod touch during the company's presentation. To win the iPod touch, attendees will need to drop off their business cards at SeaNet's vendor session on Wednesday, December 5<sup>th</sup> from 5:15 to 6:15 P.M. in room Betsy C at the Hyatt. The winner will be announced following the presentation. SeaNet is also holding a SeaView training session prior to the vendor presentation on Wednesday from 4:00 to 5:00 P.M. in Betsy C.

"Businesses are impacted daily by sporadic failures in application performance which causes IT to chase phantoms within the enterprise, destroy service level agreements and cost huge amounts of money," said Bernie Davidovics, CTO and founder, SeaNet Technologies. "Companies can't improve what they can't measure and SeaView enables businesses for the first time to measure, analyze and report one-way latency within the complete business context with an accuracy of +/-20 microseconds or better."

**About SeaNet Technologies Inc.**

SeaNet Technologies Inc. is the worldwide leader in application performance monitoring solutions. SeaNet's SeaView suite provides a highly accurate and real-time comprehensive data analysis system that enables complete measurement and analysis. SeaView's technology is built upon unique capabilities that address the challenges of application monitoring and performance management. Headquartered in Kew Gardens, NY, SeaNet is the market leader driving complete technology data analysis solutions. For further information, visit [www.seanet-tech.com](http://www.seanet-tech.com).

**About CMG**

CMG is a not for profit, worldwide organization of data processing professionals committed to the measurement and management of computer systems.
