

## **SEANET TECHNOLOGIES, INC. SELECTS PREDICTIVE NETWORKS AS CANADIAN SALES AGENT**

**Kew Gardens, New York – February 3, 2010** – SeaNet Technologies, Inc. ([www.seanet-tech.com](http://www.seanet-tech.com)), a leading worldwide provider of application performance latency measurement and reporting solutions, is pleased to announce the selection of Predictive Networks as Sales Agent in Canada. Predictive Networks is a solution provider of WAN performance monitoring, management and optimization services with customers in North America and Europe.

SeaNet Technologies, founded in 2001, pioneered the latency measurement of market data and multi-tier order execution flows in 2005 and continues to lead the industry with its SeaView Performance Solution Suite, which offers unmatched features and functionality for the measurement of latency in high frequency trading and order execution venues.

“Predictive Networks, with 15 years of experience in network modeling and performance engineering, is a perfect match for SeaNet Technologies as we endeavor to meet the increasing demand for latency measurement,” said Raymond Marra, president and CEO, SeaNet Technologies. “Our expansion into Canada is a logical extension of our business strategy of appealing to the financial services industry and we fully expect our partnership with Predictive Networks to rapidly add awareness and market share for both companies,” Marra said.

“SeaNet’s solution fits perfectly in our services portfolio of real-time monitoring of business critical applications. The core team at Predictive Networks has been engaged in application modeling and performance engineering since 1996 at national and international operating companies. Predictive Networks enables companies to see the true usage and cost breakdown of their Wide Area Network usage based on business and recreational application flows. Once these flows are optimized, reflecting the corporate business model, the question to analyze and report on the latency per individual application is an obvious one”, said Wilfried van Haeren, president and founder, Predictive Networks. “Seanet’s SeaView Solution addresses precisely this space: the increasing demand for latency measurement of business transactions.”

### **About SeaNet Technologies, Inc.**

SeaNet Technologies Inc., headquartered in Kew Gardens, N.Y., is the worldwide leader in application performance latency measurement and monitoring and data analysis tools. The SeaView Latency Measurement Solution delivers the ability to measure, monitor, and analyze the key metrics of actual market data transactions as well as full order flow detail in real-time. SeaNet is the first company to actually deliver on the business requirement to correlate the root causes of performance problems with mission-critical trade plant applications.
